

ASP.NET Core MVC Web Starter Kit

User Manual

ASP.NET Core MVC Web Starter Kit is a complete template application that is designed & developed in such a way, so that project bootstrapping tasks can be minimized. This project can be used as a complete admin dashboard by enhancing further business.

We have used the code first approach, latest AdminLTE (beautiful and responsive design), and multiple database support such as MSSQL, MySQL, and PostgreSQL. Added major technical features like, database audit log, multi-language support and so on.

Also covered a complete CRUD operation steps by steps video explanation with details of project architecture and data flow (MVC).

Profile ID	Profile Picture	First Name	Last Name	Phone Number	Email	Created Date	Created By
11		Accountants	User	71115031580	accountants@gmail.com	10 December 2022	Admin
10		HR	User	97903390660	hr@gmail.com	10 December 2022	Admin
9		Finance	User	16405945030	finance@gmail.com	10 December 2022	Admin
8		Technology	User	41882264692	tech@gmail.com	10 December 2022	Admin
7		Regular	User	15658800580	regular@gmail.com	10 December 2022	Admin
6		Employee 1	User	36093376547	Employee1@gmail.com	10 December 2022	Admin
5		Employee 2	User	53051086377	Employee2@gmail.com	10 December 2022	Admin
4		Employee 3	User	34749832795	Employee3@gmail.com	10 December 2022	Admin

Core Feature

- ASP.NET Core MVC Architecture
- Entity Framework Core code first
- Identity Core
- Multiple database support: MSSQL | MYSQL | PostgreSQL
- AdminLTE Latest Version(3.2.0)
- User Management
- Role base page access, dynamin sidebar menu
- Multiple CRUD Operation details example
- Generic dropdown data load from Database
- Dynamic SMTP email setup
- Details video on project architecture with one CRUD example
- All CRUD operation used ajax call, so no full page loading
- Identity dynamic setting
- User login history
- Database audit log
- Multi-language
- Partial page update CRUD operation
- Razor and jQuery for Front End
- jQuery DataTable for faster data load
- Sweet Alert2 and Toaster notification
- select2 dropdown
- Swagger for API documentation
- Dependency Injection
- Standard Naming conventions
- JWT Token-Based Authentication and Claim-Based Authorization
- All Methods are Async/Await
- CORS Settings
- Docker Support

Third-Party Plugins:

- Bootstrap and AdminLTE
- Font Awesome
- jQuery
- Select 2
- DataTables (with all exports options)
- daterangepicker
- datepicker
- NToasty
- sweetalert2

Technologies:

Microsoft Visual Studio Community 2022 or later, ASP.NET Core 6.0, Identity Core, Entity Framework Code First, MSSQL SERVER 2017/MySQL, AdminLTE 3.2.0, JavaScript, jQuery data table, bootstrap 4, sweetalert, toastr, Fontawesome etc.

Prerequisite Application:

Microsoft Visual Studio Community 2022 or later, .Net Core 6.0, MS SQL SERVER 2017/MySQL/ PostgreSQL, IIS, Chrome/Edge Browser.

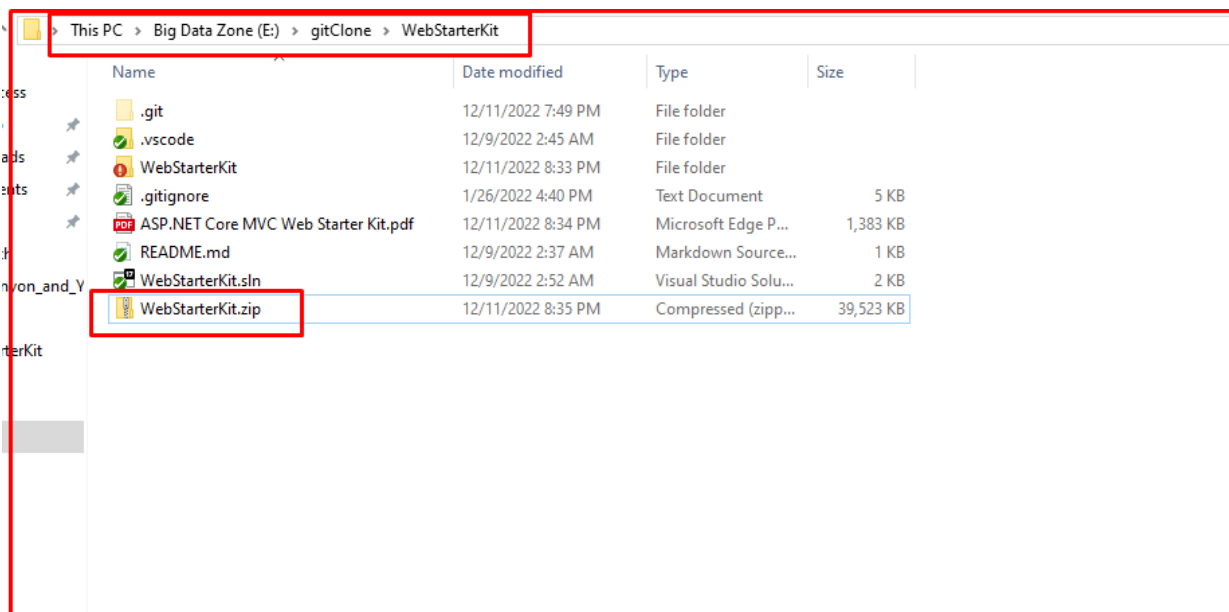

How to run this Project:

Step 1:

Unzip the downloaded zip folder (WebStarterKit.zip). Please note that, do not unzip project in such a directory/folder that path contain any space.

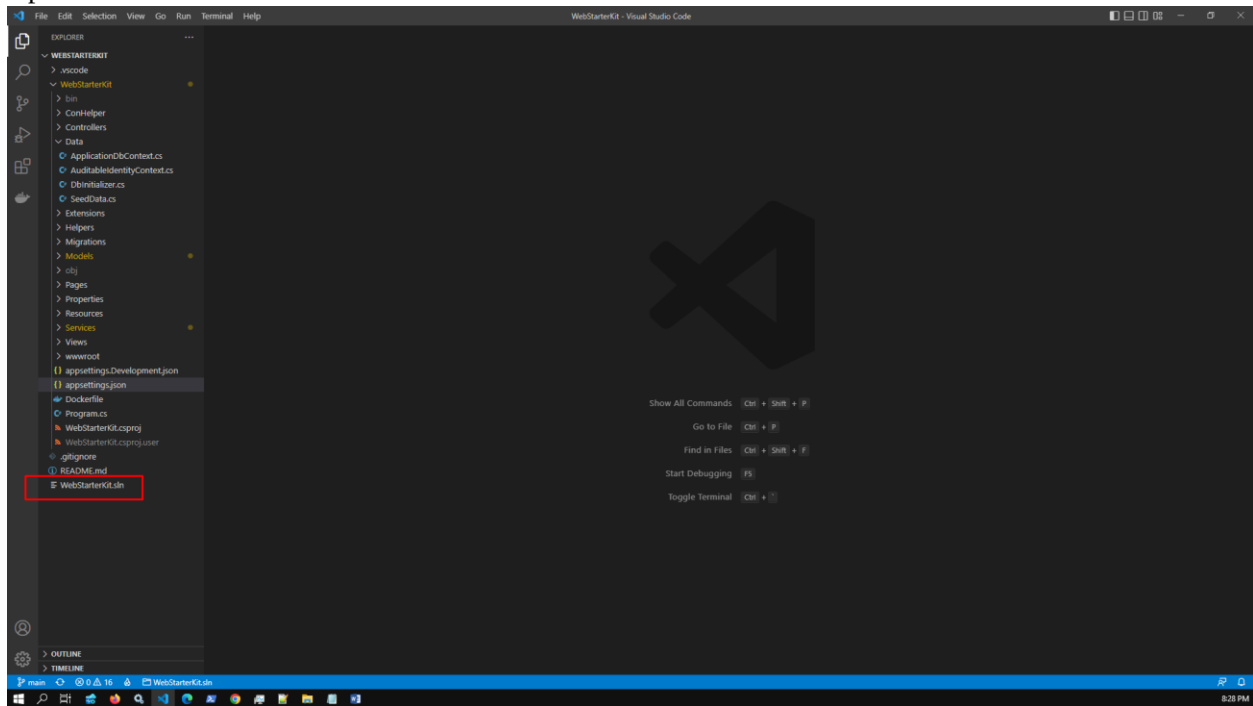

Example Wrong Path: C:\User ABC\My Project\WebStarterKit\WebStarterKit

Example Correct Path: E:\gitClone\WebStarterKit\WebStarterKit

Step 2:

Open WebStarterKit.sln file with Visual Studio 2022/VS Code

Step 3:

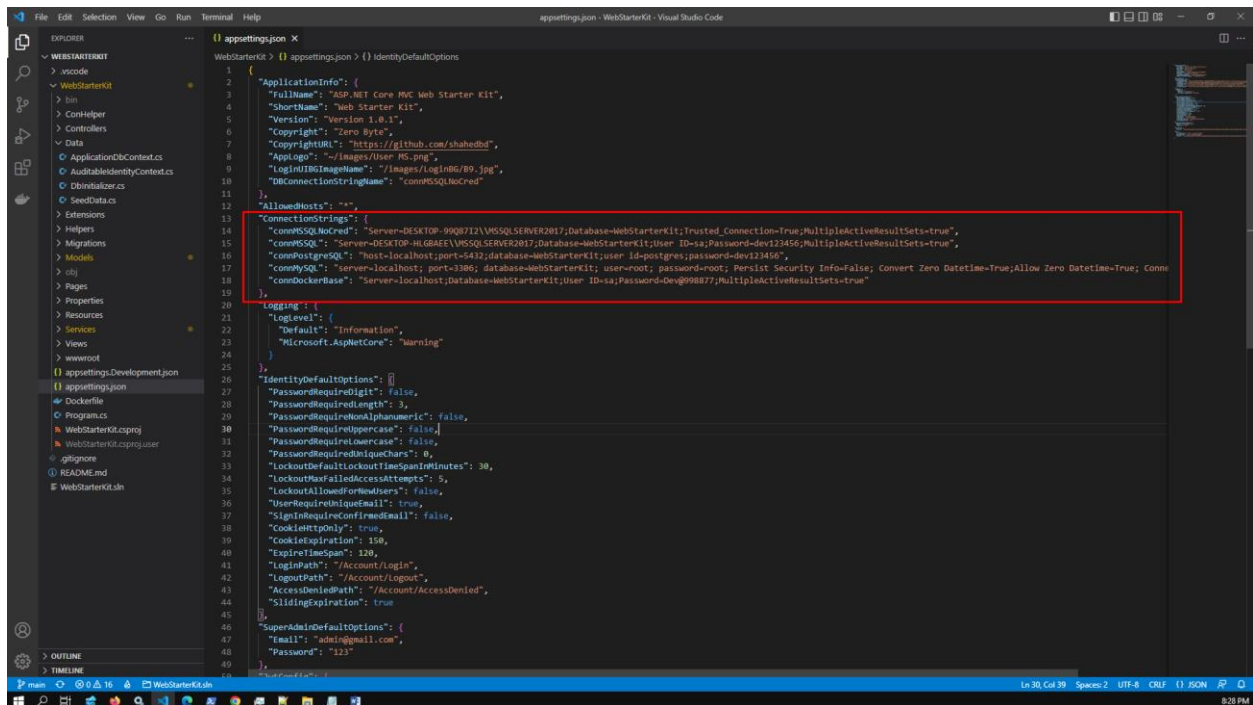

Update database connection: appsettings.json

“DefaultConnection”: “Server=DEVSTATION\MSSQLSERVER2017; Database= WebStarterKit; User ID=sa; Password=dev123456”

Server=Your MSSQL Server Name

User ID= Your MSSQL Server User Name

Password= Your MSSQL Server User Password

```
1 WebStarterKit > () appsettings.json > () identifyDefaultOptions
2
3 "ApplicationInfo": {
4   "FullName": "ASP.NET Core MVC Web Starter Kit",
5   "ShortName": "Web Starter Kit",

41   "ExpireTimeSpan": 120,
42   "LoginPath": "/Account/Login",
43   "LogoutPath": "/Account/Logout",
44   "AccessDeniedPath": "/Account/AccessDenied",
45   "SlidingExpiration": true
46 },
47 "SuperAdminDefaultOptions": {
48   "Email": "admin@gmail.com",
49   "Password": "123"
50 }
```

Database Notes:

```
public const string connMSSQLNoCred = "connMSSQLNoCred";
```

```
public const string connMSSQL = "connMSSQL";
```

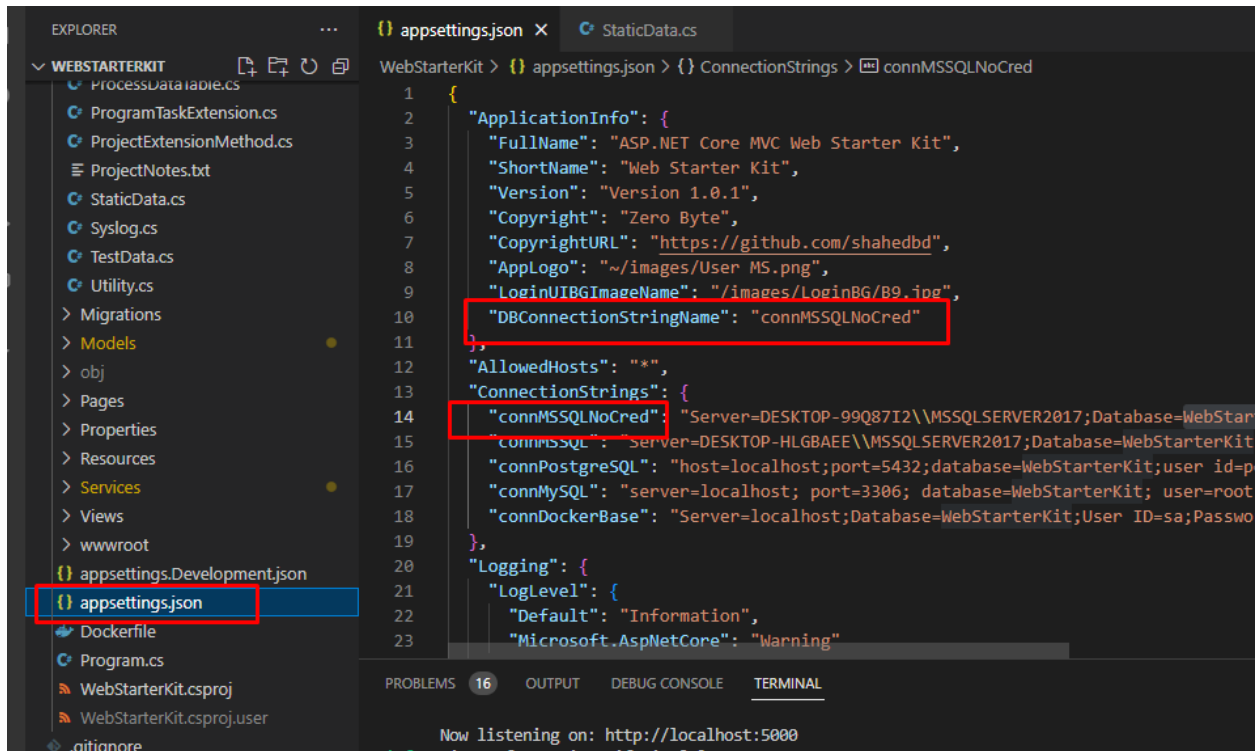

```
public const string connPostgreSQL = "connPostgreSQL";
```

```
public const string connMySQL = "connMySQL";
```

```
public const string connDockerBase = "connDockerBase";
```

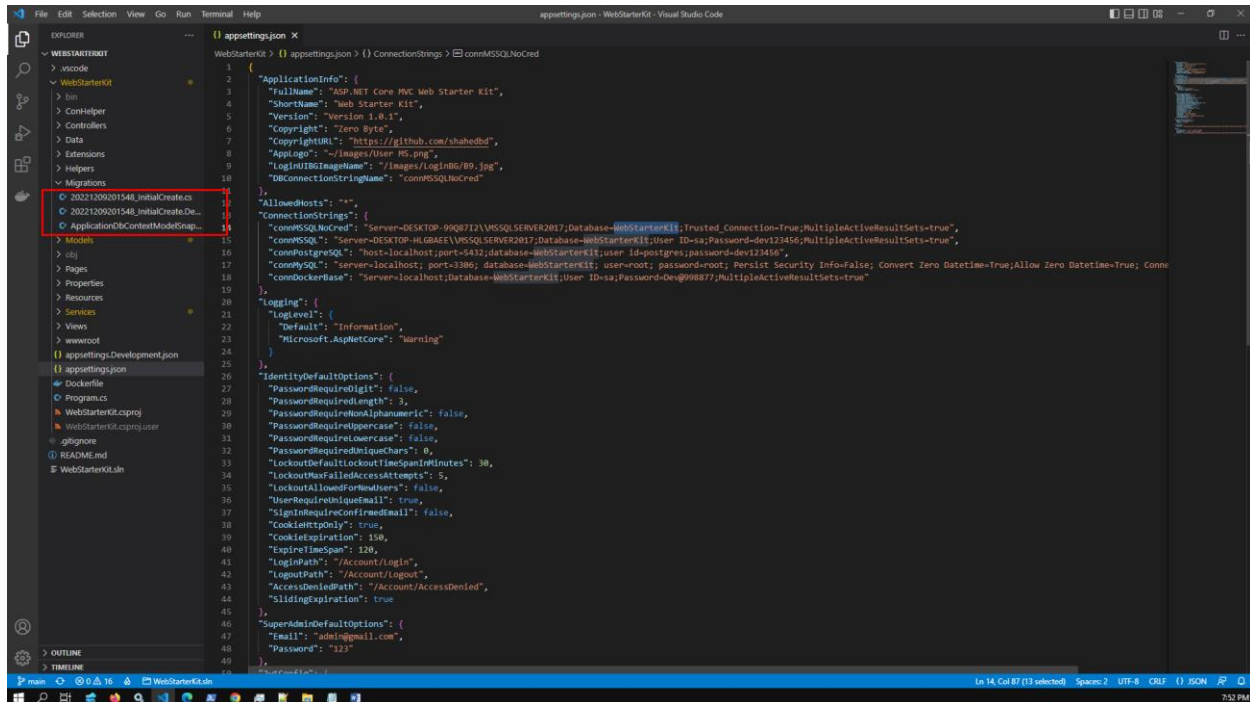

```
public const string connMSSQLProd = "connMSSQLProd";
```

```
public const string connOthers = "connOthers";
```

Step 4:

No need to create new migration rule and update database. You just need to build and run the application. Already initial migration rule included with project. Please make sure MS SQL server running properly.

Step 5:

5.1: Build application by pressing f6

5.2: Run application by pressing f5

<https://localhost:5001/Account/Login>

User Name: admin@gmail.com

Password: 123

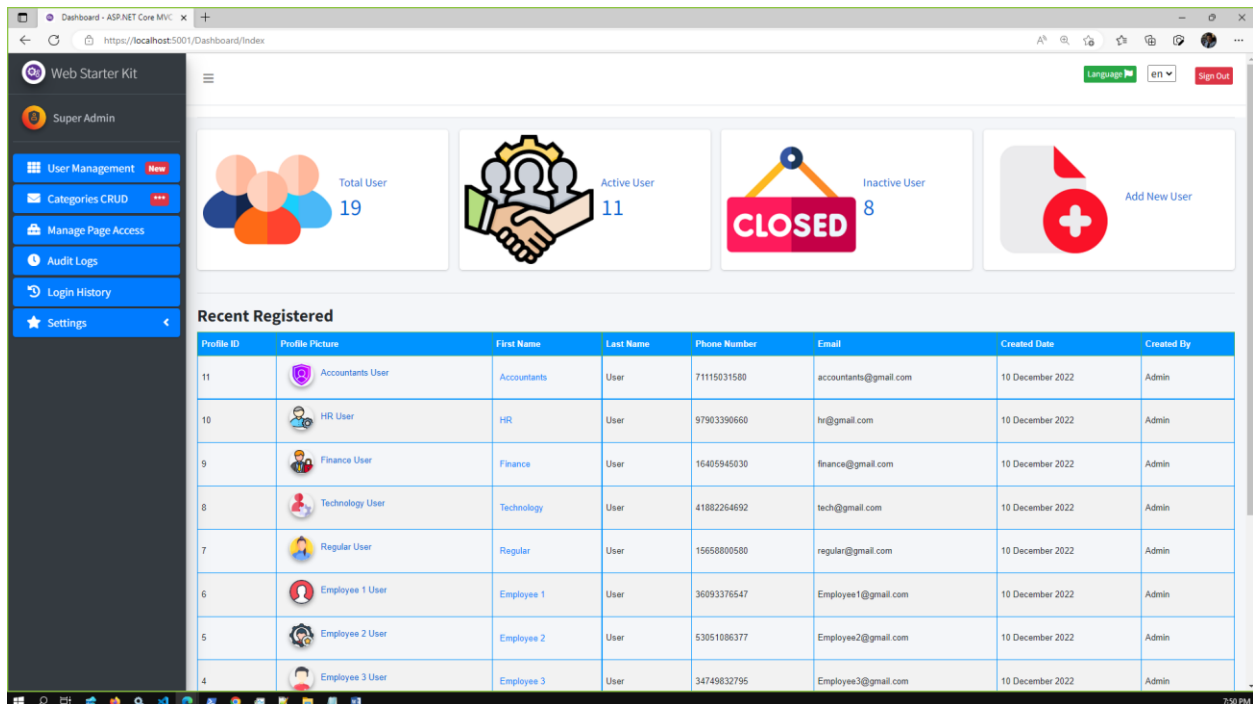

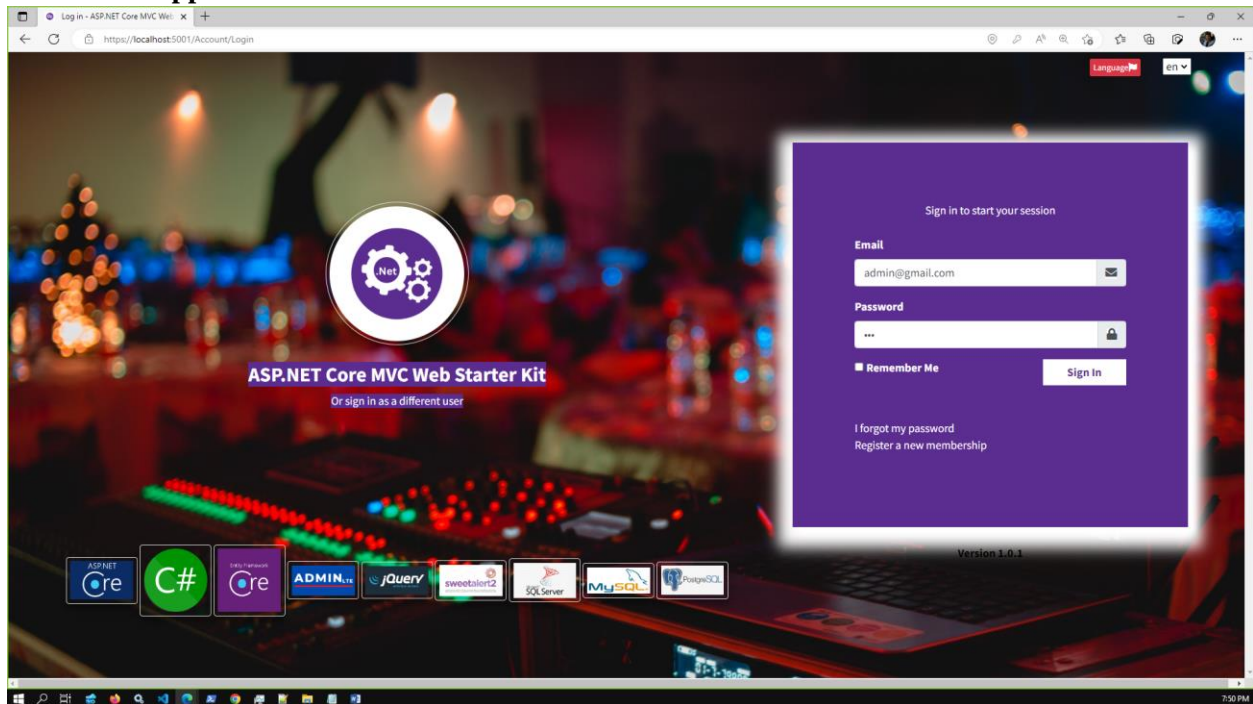

Swagger:

<http://localhost:5000/swagger/index.html>

Initially in the SQL server, relevant tables and data will be created in the database dynamically as code first approach.

Step 6:

DB Migration:

```
Tools--> Nuget Package Manager--> Package Manager Console
```

```
PM> add-migration initcreate  
PM> update-database
```

Check .Net Version:

Press Windows + R.

Type cmd.

On the command prompt, type `dotnet --version`

FAQ:

Question: *How to install Database/How to run migration/Database table not creating?*

Answer: *Please follow these steps,*

1. Make sure the right database connection is in the appsettings.json file
2. Check your server name, by running this SQL: **SELECT @@SERVERNAME AS 'Server Name'**
3. Delete the database from your SQL Management Studio (if already created)
4. Just build the project (As we have already included Migrations in the project)
5. Run the project
6. Now check your DB. Hopefully, DB and all tables you will find now.

Please cross-check, Program.cs and appsettings.json files properly.

appsettings.json

"DefaultConnectionMSSQL":

"Server=DEVSTATION\\MSSQLSERVER2017;Database=WebStarterKit;User
ID=sa;Password=dev123456;MultipleActiveResultSets=true",

Note that,

Server = your local server

Database = any name

User ID=your local MSSQL Server user name

Password=your local MSSQL Server user password

Required Application:

- Visual Studio 2022
- MSSQ 2017/later
- Dotnet SDK 6.0

Our Product:

SL	Product
1	Advance POS System with Stock Manager ASP.NET Core EF Core .NET Core 6.0
2	Asset Management System with Barcode ASP.NET Core EF Core .NET Core 6.0
3	Hospital and Pharmacy Management System ASP.NET Core EF Core
4	ASP.NET Core full CRUD with .NET 5 MSSQL/MySQL EF code first
5	Inventory and User Management System
6	Invoice Gen(Invoice Generation and Management) using .Net Core and EF
7	Complaint Issue Helpdesk Ticket My Ticket HelpDesk Support System ASP.NET Core EF Core
8	Advanced Files & Users Management ASP.NET Core EF Core .NET Core MSSQL MySQL
9	User Management
10	Business ERP Solution/Product/POS/Company Management
11	School/College/University Management ERP
12	ASP.NET Core CRUD Operation Using Dot Net 6.0 MVC MSSQL MySQL EF Core Code First jQuery
