

Complaint Management System-User Manual

Complaint (Issue/Helpdesk/Ticket) Management System is a complete web application build with ASP.NET Core (3.1), Identity Core, C#, EF code first approach and AdminLTE.

These web applications allow you to create, update delete, read, and manage customer complaints with required data reporting, proper issue status progress monitoring, cool responsive UI, and firster paging, sorting, and searching functionality. Additionally, system will store each user's login history separately for each login and logout time into the system.

Application will allow you to collect all of your customer support requests as a digital complaints from various channels and manages them from one place properly. As an Admin user you can add unlimited complaints/issues categories, status, and priority from the admin panel so that the end-users can create complaints/issues accordingly.

An admin user can manage all users and complaints progress from the admin panel with proper action and a relevant data reporting system.

Application Major User Category:

1. Admin User
2. Complaint Raise User

Admin User:

Can manage, monitor full system and he/she can create unlimited Complaint/Issue categories, status, and priority. Only Admin user has full access control on reporting system and application major setting options.

Complaint Raise User: Based on allowed page access, users can create complaints and get updates from that complaint if any action has changed into that complaint.

Application Modules:

1. Complaint/Issue Management Module
2. Application Setting Module
3. Reporting Module

Application User Journey

Complaint Raise User:

As a complaint raise user I can create a complaint, add documents to my complaint, add comments, get a notification for any update of that complaint, and can change the complaint progress status as well. Also, I can assign my assigned to me complaint to another user from the listed available user.

Finally, I can print the complaint or download it as a PDF file with details of the complaint.

Admin User:

An admin user has full control of the system. Here is a summary of features of the admin user,

1. Can create unlimited Complaint/Issue categories, status, and priority
2. Can change the assignee and update issue progress status
3. Can generate two different reports for monitoring the ongoing issue and submit the complaint status to management,
 - Complaint Status Summary Report
 - Assigned To Summary Report
4. Monitor user comment, attached file and application all user
5. Manage company logo, name, etc. from admin panel
6. Manage SMTP settings for email notification from the admin panel
7. Can easily close/update Complaint/Issue and have full control over it.

Technologies:

Microsoft Visual Studio Community 2019 or later, ASP.NET Core 3.1, Identity Core, Entity Framework Code First, MSSQL SERVER 2017, AdminLTE 3.0.5, JavaScript, jQuery data table, bootstrap 4, sweetalert, toastr, Fontawesome etc.

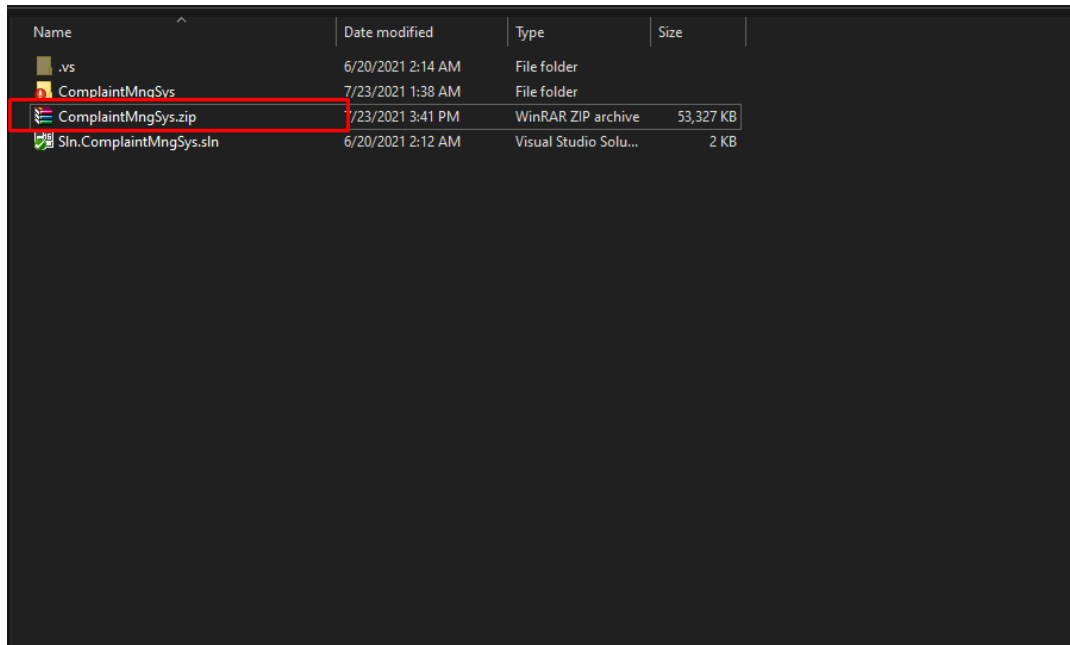

Prerequisite Application:

Microsoft Visual Studio Community 2019 or later, .Net Core 3.1, MS SQL SERVER 2017, IIS, Chrome/Edge Browser.

How to run this Project:

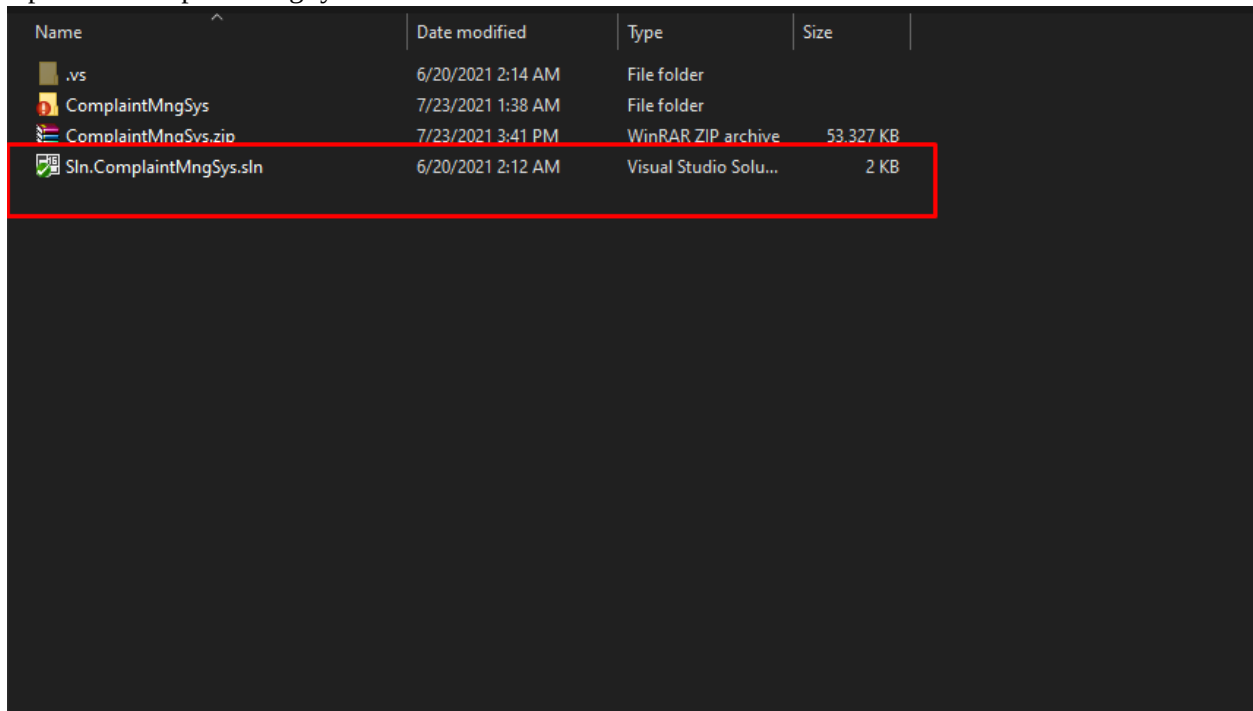

Step 1:

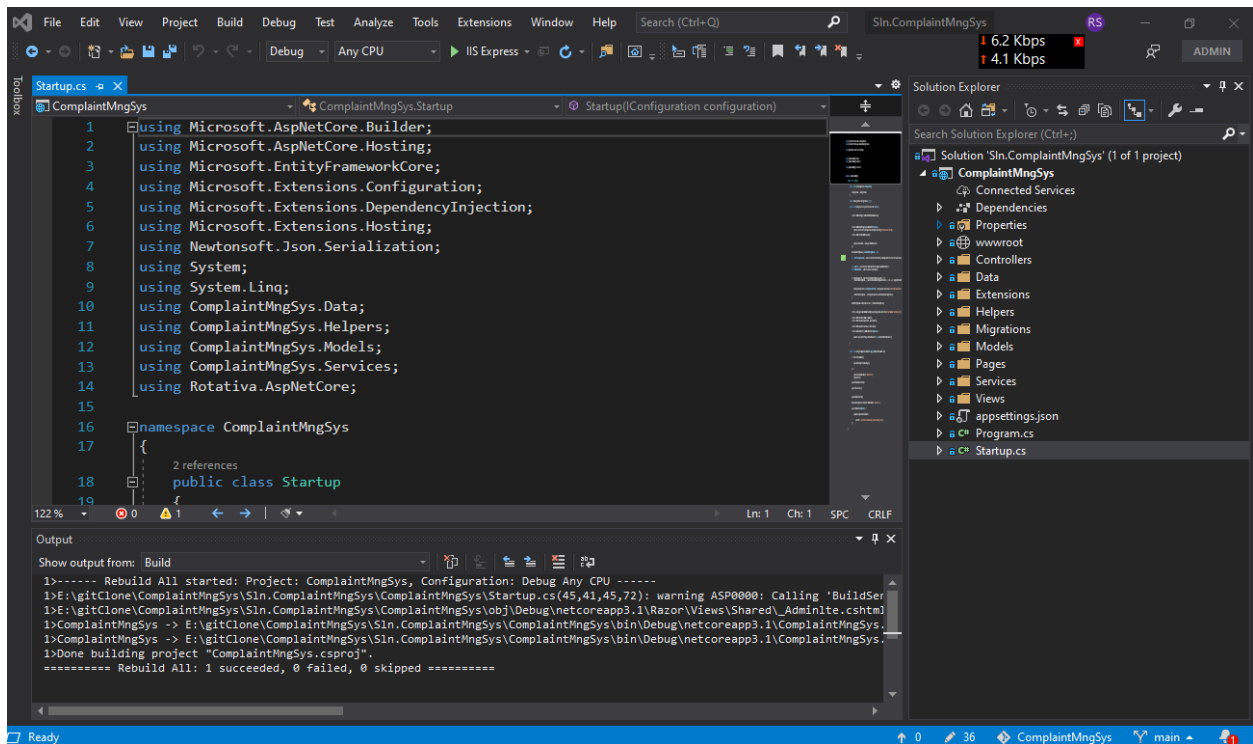

Unzip the downloaded zip folder (ComplaintMngSys.zip)

Step 2:

Open Sln.ComplaintMngSys.sln file with Visual Studio 2019

Step 3:

Update database connection: appsettings.json

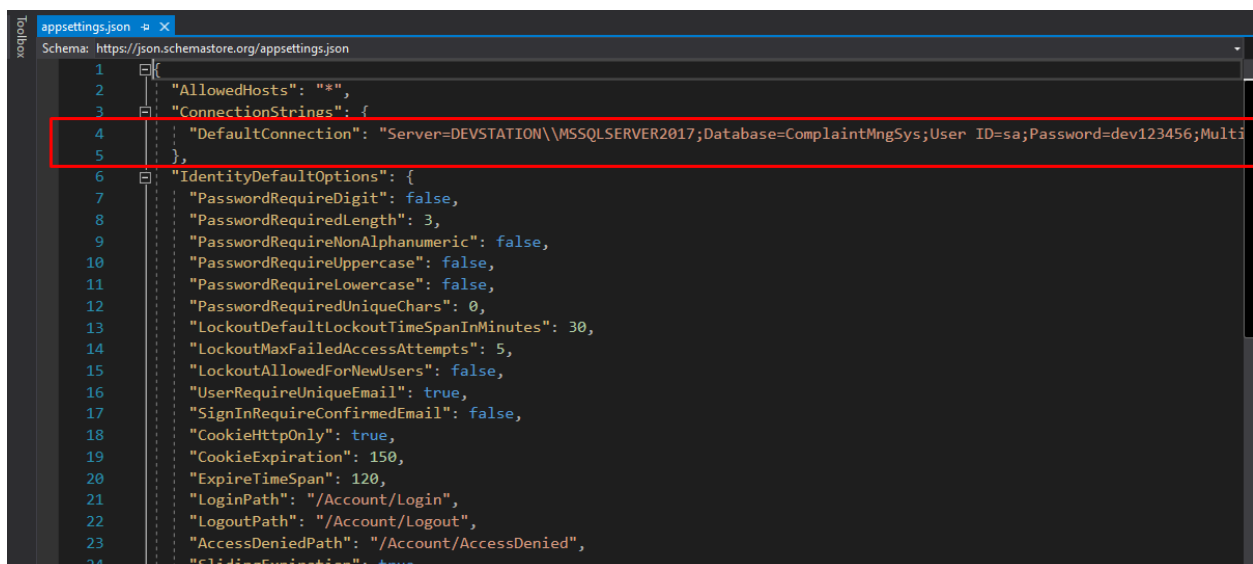

“DefaultConnection”:

“Server=DEVSTATION\MSSQLSERVER2017;Database=ComplaintMngSys;User ID=sa;Password=dev123456”

Server=Your MSSQL Server Name

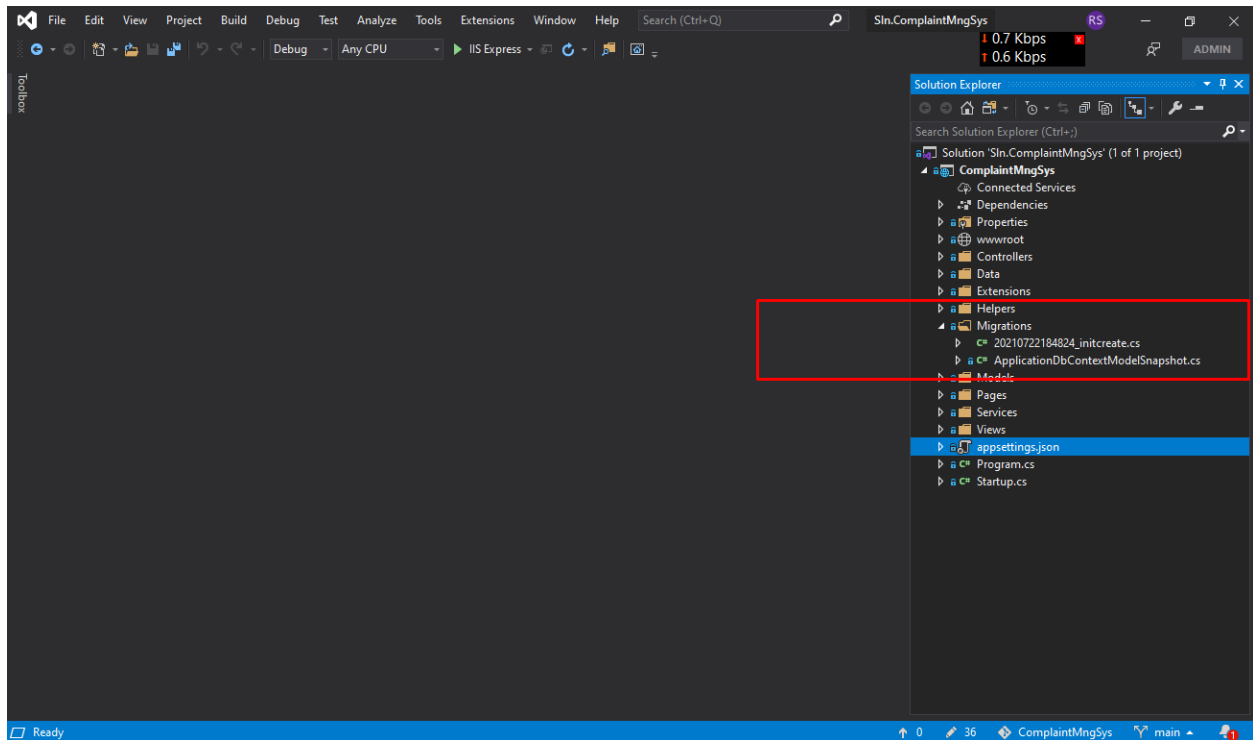

User ID= Your MSSQL Server User Name

Password= Your MSSQL Server User Password

Step 4:

No need to create new migration rule and update database. You just need to build and run the application. Already initial migration rule included with project. Please make sure MS SQL server running properly.

Step 5:

5.1: Build application by pressing f6

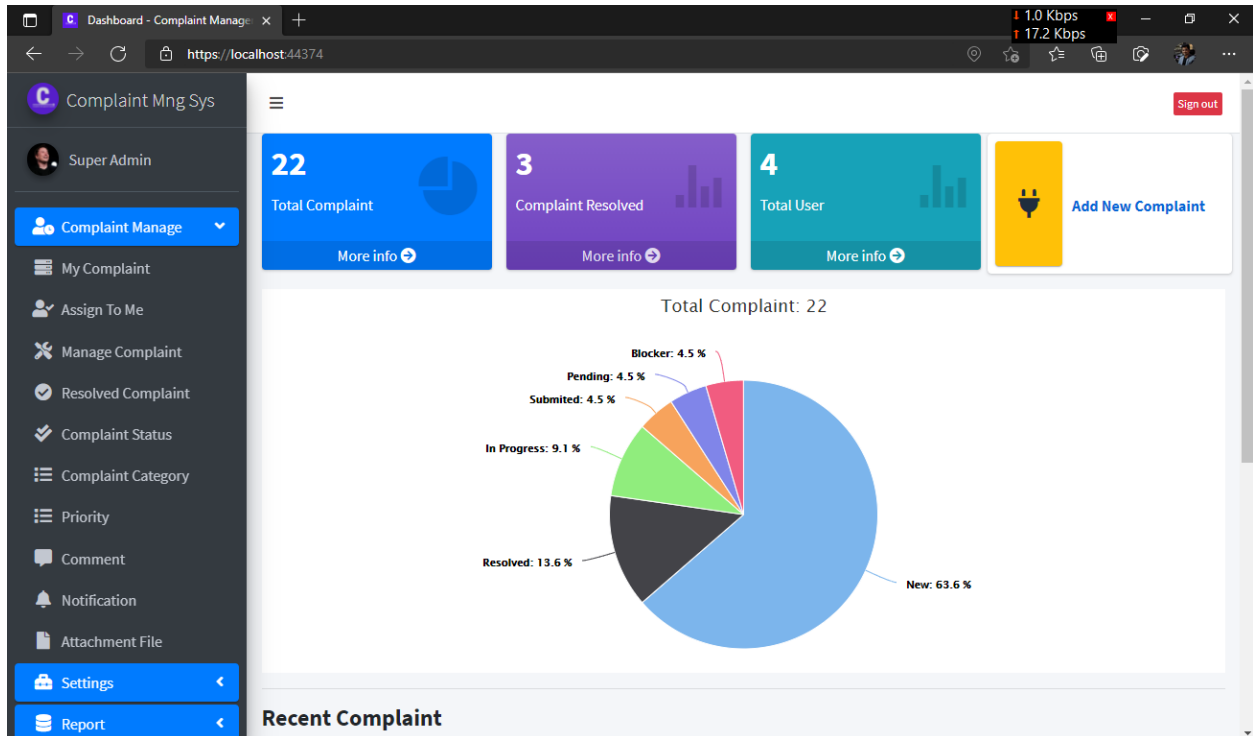

5.2: Run application by pressing f5

<https://localhost:44374/>

Initially in the SQL server, relevant tables and data will be created in the database dynamically as code first approach.

Step 6:

Browse full application.

Sample PDF Report:

The screenshot shows a PDF report titled 'COMPLAINT' from XYZ Company Limited. The report includes contact information for the company and a table of complaint details. The 'Print Date' is 23 July 2021.

COMPLAINT	
XYZ Company Limited	
Dhaka, Bangladesh	
Mobile: 132546789	
Email: XYZ@GMAIL.COM	
Website: www.wyx.com	
Print Date : 23 July 2021	
Id	22
Code	C20210723125428
Name	Logo andFavicon
Description	Please add new Logo and Favicon in the web site
Category	Default

App Screenshot: <https://cutt.ly/qm445D1>

Key Features:

1. Major three modules: Complaint/User/Reporting
2. Modern, responsive, easy, and simple user interface to use
3. Fully dynamic and customized Complaint/Issue management system
4. MVC design pattern with clean code
5. ASP.NET Core, C#, Entity Framework Core, Code First approach
6. Roles base(Page-wise) user access permission
7. Create and manage Complaint/Issue
8. File attachment option in Complaint/Issue
9. Download/Delete attached file
10. Dynamic comment/feedback option on each Complaint/Issue
11. Proper notifications for every Complaint/Issue
12. Manage company logo, name, etc. from admin panel
13. Manage SMTP settings for email notification from admin panel
14. Admin/User can easily close/update Complaint/Issue and have full control on it.
15. Admin can create unlimited Complaint/Issue categories, status, and priority
16. User login history
17. Reset password with password reset link
18. Complaint/Issue status pie-chart summary for admin user
19. Powerful admin panel and reporting system
20. Dynamic custom grids with column ordering, faster data loading, pagination and many more

DB Migration:

Tools--> Nuget Package Manager--> Package Manager Console

```
PM> add-migration initcreate
```

```
PM> update-database
```

Check .Net Version:

Press Windows + R.

Type cmd.

On the command prompt, type dotnet --version
