Step 4:

No need to create migration rule and update database. You just need to build and run the application. Already initial migration rule included with project. Please make sure MS SQL server running properly.

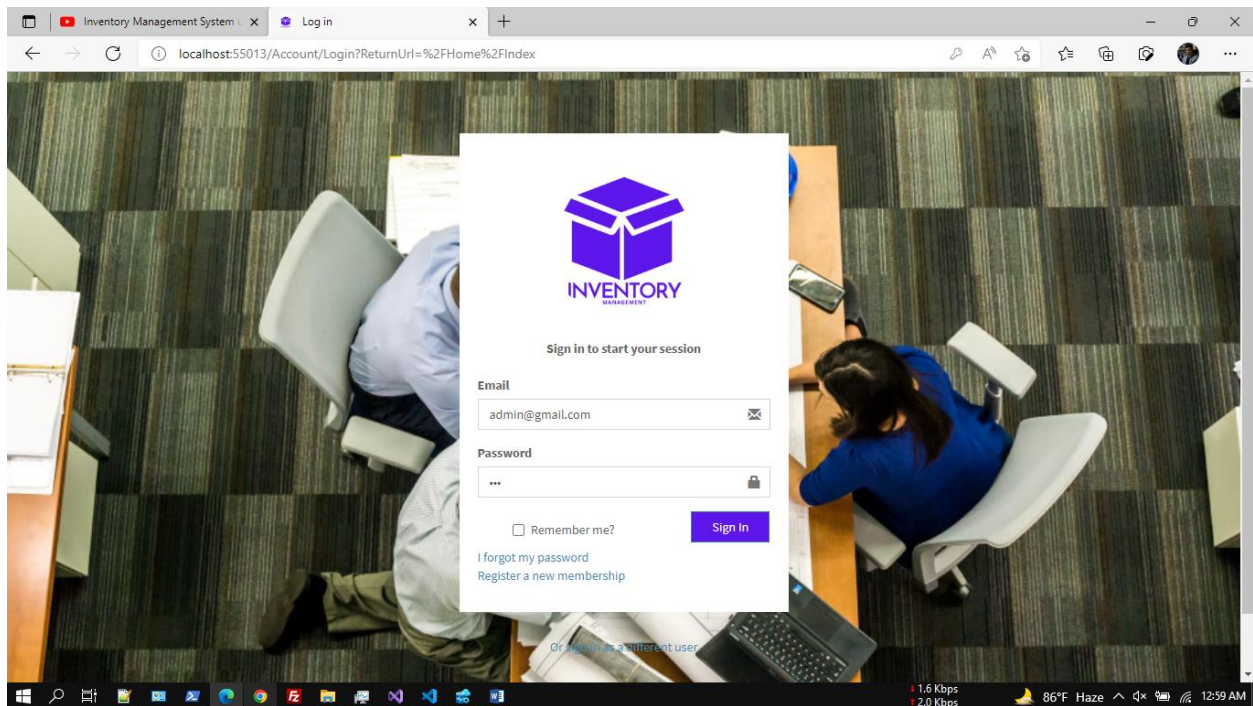

Step 5:

5.1: Build application by pressing f6

5.2: Run application by pressing f5

<https://localhost:44308/>

Initially in MS SQL server, admin user, and all relevant dropdown data will be created in the database dynamically as code first approach.

Step 6:

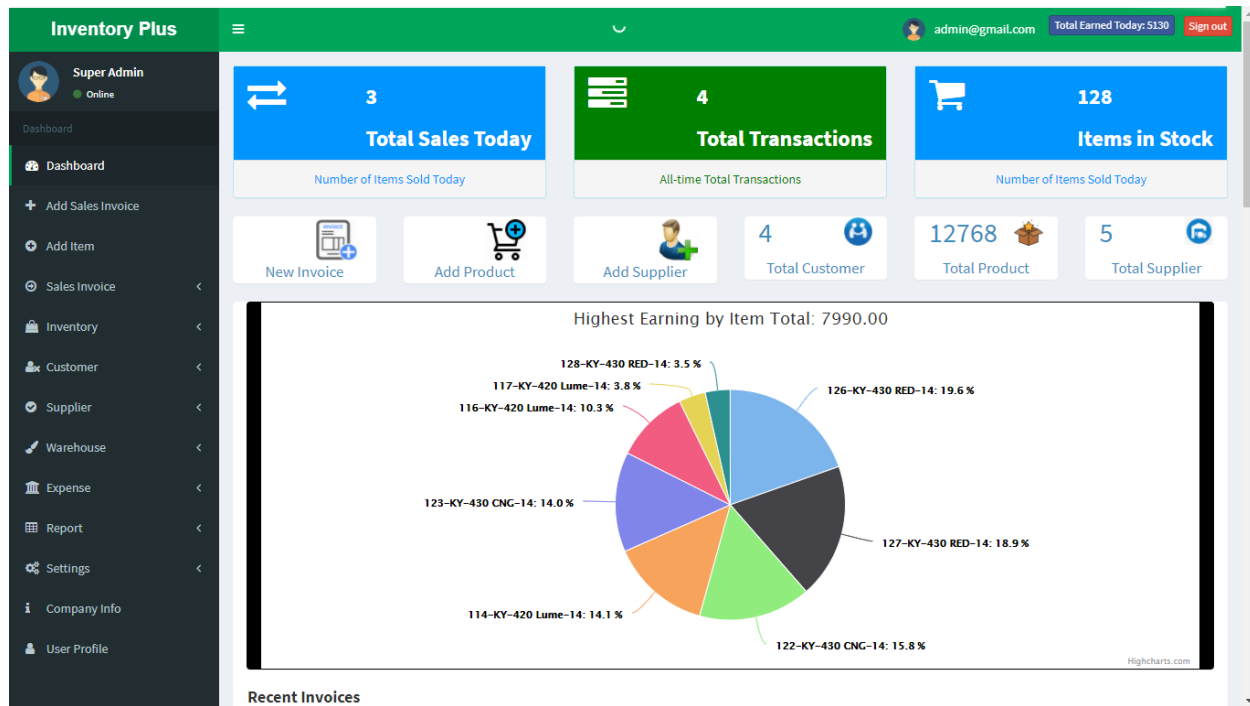

Login into application with dynamically created default admin user.

User Name/Email: admin@gmail.com

Password: 123

Step 7:

Browse full application.
